

HIGHLIGHTS

Go Communicator is a Unified Communication software suite that connects to FirstComm Cloud PBX Platform via a public or private network. The software allows users to have a level of integration, communication and collaboration with the FirstComm UC solution.

USER FEATURES

- Call Control— offers a full range of access to control inbound and outbound calls without touching the handset
- Caller Preview— allows the user to see who is calling before answering
- Screen Popping— a caller’s full details can be quickly “popped” on the screen, if their located in an integrated application
- Address Book— search in the user’s personal directory for a name or number from all linked databases
- Recent and History Lists— view recent call history that was made or received and redial with a single click from the menu
- Integrations— link your business database with a telephone system to save time and improve productivity
