

WIRELESS BUSINESS INTERNET SOLUTION

Works best when combined with SD-WAN 40F Add-On

LTE Business Internet as the primary network connectivity or backup for locations with limitations or specific needs, such as: those with restrictions in wireline network accessibility or locations with specific connectivity needs. And with virtual demands on the rise, this can be highly valuable in initial phases of remote/field location deployments.

Reliable, Flexible & Effective Wireless Solution

Whether you are a small-medium business with one temporary site or an enterprise with a large-scale secondary ISP deployment or just need backup for critical operations, LTE Business Internet offers a fast, reliable internet connection that you can easily install at any location where you have LTE coverage.

Reduce Costs

Leased-line service costs can range from hundreds to thousands of dollars, depending on the T1 connection needs. And deploying new services or bandwidth upgrades can be extremely costly and time consuming. With LTE Business Internet, you can deploy real-time and reduce T1 costs, quickly and easily.

	Speed Tier ¹ (Mbps)	Total Data ² (GB)	Price ³ (MRC)
Digi LTE Business Internet Modem	3 Mbps	50 GB	Contact Sales
	10 Mbps	100GB	
	25 Mbps	200GB	
	50 Mbps	300 GB	

1. Speed Tiers throughput speeds are "Up to" speeds – no SLA or QoS to guarantee throughput
2. For all LTE Business Internet plans outlined above, the first 50% of a customer's data allowance is automatically prioritized. For the remaining data, connection speeds may be temporarily slower if the local network (tower) is experiencing congestion. Once the data allowance threshold has been exhausted, devices will continue to connect at speed of up to 600Kbps
3. Pricing based on 36 month contract
